

SYSTEM BOUNDARIES

Objective 10

(Form 6)

As a review, one of the principles that apply to every system is the permeability of its boundary can be controlled by the system. The amount of resources a system consumes, how these resources are consumed and the efficiency at which they are consumed are based on the permeability of the boundary. The things that hamper this permeability are often the root causes of the problems that are preventing an organization from operating at peak performance. It is your employees that have the ability to control the permeability.

Name two areas in your company where you believe the employees have the greatest ability to affect the way this company operates.

Name two areas in your company where you believe the employees have the least ability to affect the way this company operates.
